Al Diyafah St. Jumeirah 1, Dubai.

About Jewelita Tamper Proof Tag

- Safeguard your valuable jewelry inventory using our advanced RFID tamperproof tags, specifically designed to prevent tampering and ensure the security of your products.
 - With our tamper-evident RFID tags, you can have peace of mind, knowing that your jewelry items are protected from unauthorized access, tampering, and counterfeiting.
 - Our RFID tamperproof tags provide the ultimate solution for jewelry retailers and manufacturers who prioritize maintaining the authenticity and integrity of their products.
 - Eliminate the risk of product tampering with our non-transferrable RFID tags, guaranteeing that once removed or tampered with, the tag cannot be re-used.
-

Smart Add-On

RFID Handheld Reader

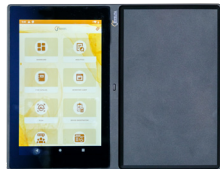

The combination of the RFID handheld reader and the Jewelita handheld application allows users to effortlessly conduct audit and transfer operations. The RFID module is highly capable, offering scanning speeds of over 100 items per second even from a greater distance and without requiring a direct line of sight.

RFID Printer

RFID printers are utilized for printing jewelry tags with embedded RFID technology. In addition to printing, these printers encode data into the microchip, which can then be read using an RFID handheld device, even without line of sight.

Smart Tray

Our smart tray offers several features, including the ability to improve the customer experience, evaluate sales strategies, analyze customer buying trends, and remain ultra-lightweight. Our tray features an inbuilt display that provides comprehensive information about the ornaments placed on it, eliminating the need for a salesperson's assistance.

Smart Box

Our smart box is designed specifically to track and trace items that have been RFID tagged and are placed inside the box. It minimizes the need for manual counting and stock-taking processes, reducing the risk of errors. It also provides real-time visibility into actionable product data, streamlines workflow automation, and facilitates inventory monitoring.

Smart IOT Gate

It is a cutting-edge integrated IoT gateway that incorporates RFID technology to enable loss-prevention and item monitoring. It boasts a state-of-the-art design with a built-in computing module, making it a powerful solution for advanced IoT applications.

Tamper Proof Tag

Our advanced RFID tamperproof tags are specifically designed to safeguard your valuable jewelry inventory, preventing tampering and ensuring your products remain secure. With tamper-evident RFID tags, you can relax, knowing that your jewelry items are protected against unauthorized access, tampering, and counterfeiting.
